

PREMIER MIS

脊柱后路微创钉棒系统

A new generation of pedicle screw systems

Three screws to meet clinical needs

Angle screw

polyaxial pedicle screw

Uniplanner Screw

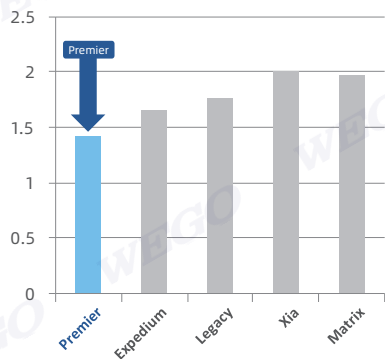

New threaded barb trapezoidal structure, explosion-proof wire

The screw seat volume is optimized and the screw notch is ultra-low

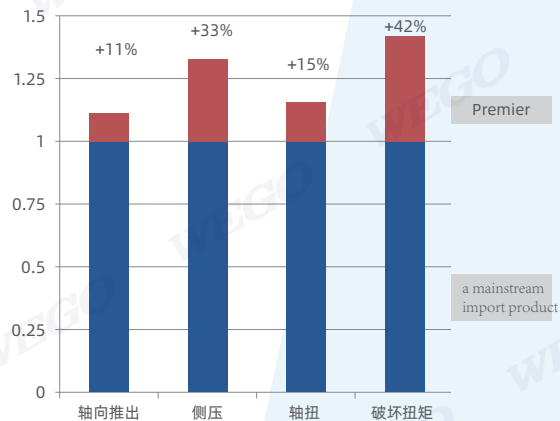

Screw seat profile volume comparison direct view

Screw Seat Contour volume comparison (cubic cm)

Excellent mechanical properties brought by novel structural design

Comparison of mechanical properties of Premier VS a mainstream import product

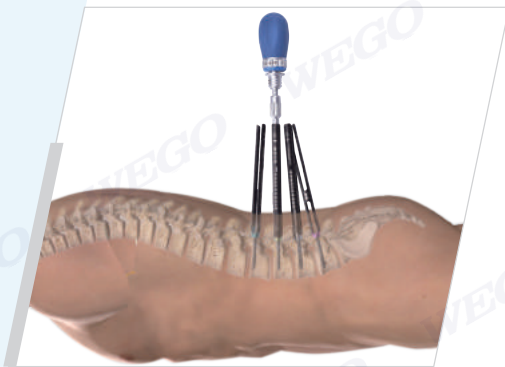

Optimized simple minimally invasive tools

With the screw shrapnel card connection, easy to disassemble

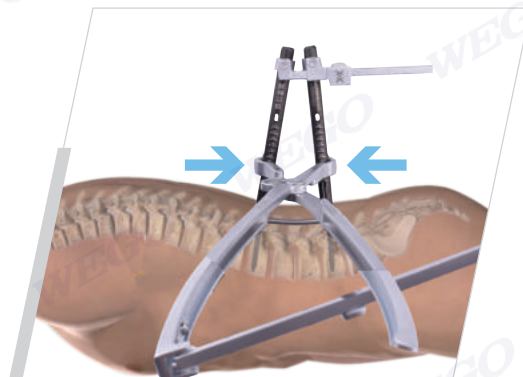

Screw extension sleeve unique thread butt technology, can directly rely on the top wire press rod, no additional press rod tools

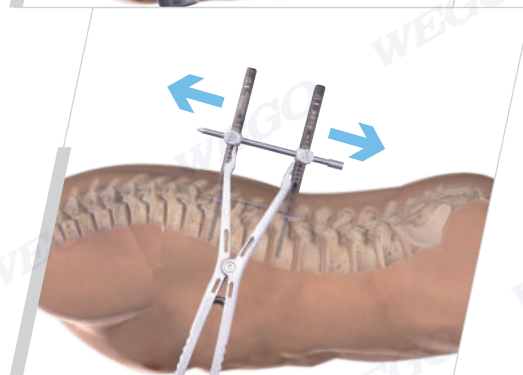

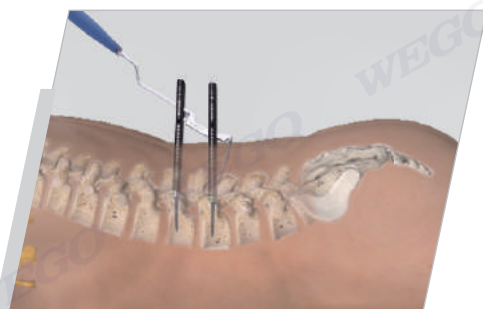

The extension sleeve semi-open design allows the extension sleeves to cross over each other for easy pinning in sections with large angles such as L5-S1

By extending the sleeve, with special pressure stretching tool can achieve perfect stretching pressure

The semi-opening design of the extension sleeve and the rod piercer cooperate to make the rod piercing operation more simple and convenient

PREMIER MIS

脊柱后路微创钉棒系统

首屈一指经皮胸腰椎微创治疗一揽子解决方案
Top-notch package deal for MIS percutaneous thoracic-lumbar treatment.

基于本土的研发与生产，为中国术者提供理念到现实的转化
China-based innovation and manufacture provide Chinese doctors with exceptional transition from perception to reality.
